

Nationwide pool results provided by NECA for 2008 are shown in Tables 3.4 and 3.5. Table 3.4 summarizes the CL pool revenues and expenses for the year 2008, as well as a comparison with the corresponding figures for 2007. Table 3.5 has comparable figures for NECA's traffic sensitive pool.

To reduce disparities in CCL rates among ILECs after companies were permitted to withdraw from the CL pool, LTS was set up. LTS originally consisted of payments to the NECA CL pool from companies that withdrew from the NECA CL pool. Companies remaining in the NECA pool charge CCL rates, pursuant to the NECA tariff, which were formerly equal to the average CCL rate of the price-cap companies. Effective January 1, 1998, the funds for LTS came from the federal universal service support mechanisms, and LTS was portable to CETCs. At the same time, the NECA pool rate no longer was made equal to the average price-cap rate. Rather, the amount of LTS that a NECA pool member was eligible to receive in 1998 was the 1997 level of LTS (the difference between 1997 CCL revenue requirements and the sum of 1997 CCL revenues using the NECA pool rate and 1997 subscriber line charge revenues) multiplied by the rate of growth of the national average NTS cost per loop. The 1999 level of LTS was similarly adjusted from the 1998 level by the national average loop cost growth rate. Beginning January 1, 2000, LTS was adjusted for inflation to reflect the annual percentage change in the GDP-CPI.<sup>32</sup> After the implementation of ICLS (see below), the Commission determined that it was necessary to reduce LTS for some carriers to prevent over earning by those carriers whose ICLS would otherwise have fallen below zero.<sup>33</sup> Effective July 1, 2004, LTS was merged into ICLS.<sup>34</sup>

In response to the 1996 Act, the Commission also removed implicit support from interstate access charges. In November 2001, the Commission created the ICLS mechanism for rate-of-return carriers to convert implicit support in the access rate structure to explicit, portable support.<sup>35</sup> ICLS recovers any shortfall between the allowed common line revenues of rate-of-

return carriers and their subscriber line charge revenues and gradually replaces the carrier common line charge. Under the *MAG Order*, the ICLS mechanism was implemented beginning on July 1, 2002.

On May 31, 2000, the Commission established an explicit interstate access support (IAS) mechanism for price-cap carriers to replace the implicit support previously collected through interstate access charges.<sup>36</sup> Like ICLS, the purpose of this mechanism is to provide explicit support to ensure reasonably affordable interstate rates. This is in contrast to the Commission's other high-cost support mechanisms, which provide support to enable states to ensure reasonably affordable and comparable intrastate rates. The IAS mechanism provides support to carriers serving lines in areas where they are unable to recover their permitted revenues from the subscriber line charges. The support total is an aggregate annual amount of approximately \$650 million. Support is targeted to the density zones that have the greatest need for it, and is provided on a portable, per-line basis. It is available on a competitively neutral basis to any ETC serving a supported customer, regardless of the technology used by that carrier.

LSS provides support for traffic sensitive local switching costs. LSS provides support to ILECs with study areas of 50,000 or fewer access lines, to help defray the higher switching costs of small ILECs. The LSS is recovered through the universal service support mechanisms, rather than through higher traffic-sensitive access charges. Until the end of 1997, this support was implicitly included in those access charges, based on dial equipment minute (DEM) weighting.<sup>37</sup> The portion of these costs that were normally allocated to interstate was determined by the ratio of interstate to total dial equipment minutes, known as the DEM factor. However, ILEC study areas with 50,000 access lines or fewer had that portion multiplied by a weighting factor, which was determined by the number of access lines in the study area.<sup>38</sup> The resulting weighted DEM

37 Table 3.7 of the *2003 Universal Service Monitoring Report* provides estimates of DEM weighting impacts from 1993 to 1997.

38 The weighting factors, which became effective in 1993, are shown in Table 3.6 of the

factor (which was not permitted to exceed .85) allowed these study areas to recover a greater portion of their local switching costs from interexchange carriers in the form of higher access charges.<sup>39</sup>

Since 1998, the LSS factor has been calculated as the difference between the 1996 weighted DEM factor and the 1996 unweighted DEM factor. It is subject to the limit that the sum of the DEM factor and the LSS factor shall not exceed .85. Also, if the number of lines has increased since 1996 across one of the limit values of 10,000 or 20,000 or 50,000 lines, the 1996 weighted DEM factor used for computing the LSS factor is adjusted to reflect the weighting factor appropriate for the new number of lines. The LSS is the product of a carrier's annual unseparated local switching revenue requirement multiplied by its LSS factor. The Commission's rules require that the LSS be true-up with actual costs no later than 15 months after the end of the calendar year for which historical data are submitted.<sup>40</sup>

All of the universal service support mechanisms are administered by USAC, an independent subsidiary of NECA. As part of its administration of these support mechanisms, USAC files quarterly reports with the Commission, at least 60 days prior to the start of each quarter. These reports include quarterly projections of the amounts to be paid for each program, along with true-ups (differences between actual payments and projections) for prior periods, administrative expenses and interest income. The report for the fourth quarter of 2009, filed on July 31, 2009, was the one used to compile the 2009 projections for the tables in this section. Information on actual support payments since 2003 can be found on the USAC website,<sup>41</sup> and data provided to us by USAC on annual support payments between 1998 and 2002 were used for those years. Tables 3.6 through 3.14 provide a summary by state of the total amounts of these support payments. Each table summarizes the annual amounts for the high-cost programs for those years the program existed between 1998 and 2009. Table 3.6 summarizes HCLS payments, Table 3.7 summarizes safety net additive support payments, Table 3.8 summarizes

- 42 The payments for the forward-looking high-cost model support only include payments actually made based on the model. In cases where the HCL hold-harmless payment was made because it exceeded the model amount, the model amount was not counted and the hold-harmless payments were included in HCLS.
- 43 Loops or lines from USAC's Fund Size Projection for the Fourth Quarter 2008 were used because USAC's files showing actual payments do not include the number of loops or lines on which those payments are based. For ILECs, the maximum of loops or access lines for the various support mechanisms were used, and for CETCs, rural and non-rural components were considered separately, and IAS and ICLS access lines were added. Only those CETC loops or lines that were reported as eligible for support in the Fourth Quarter filing or received support payments in 2008 were included.

of year adjustments for prior years. In all cases the 2009 total is based on the fourth quarter projection.

Pursuant to Part 36 of the Commission's rules, NECA collects certain cost data from ILECs that provide service to approximately 98% of the nation's ILEC subscribers.<sup>47</sup> Each year NECA collects NTS cost and loop data from the previous year, and files all such data with USAC and the Commission. USAC, as administrator of the high-cost support mechanism, uses that information to distribute high-cost assistance in the following year. On September 30, 2008, NECA reported new data for 2007, and revised data for the four previous years. State totals, based on that report, covering cost data for 2007, are presented in Table 3.17. This table shows unseparated NTS costs (revenue requirement), the number of loops, and costs per loop. It also shows the expected HCLS payments for 2009, based on 2007 data, using the high-cost formula and the cap discussed above. The costs shown are embedded costs for all companies.<sup>48</sup> The final column shows the percentage of the total payments going to companies in the state.

Table 3.18 shows the changes, from the revised data for 2006 to the newly reported data for 2007, for state totals, of the unseparated NTS revenue requirement, the number of loops, the revenue requirement per loop, and the HCLS payments. The phrase, "payments in later year" in the last column refers to the fact that these are projections of payments to be made two years after the costs are incurred; in this case, in the years 2008 and 2009.

Tables 3.19 through 3.21 present state summaries of the revised historical information filed for 2003 through 2007 in the 2008 filing. Table 3.19 shows the unseparated NTS revenue requirements for each year. Table 3.20 shows the number of loops. Table 3.21 shows the unseparated NTS revenue requirement per loop.

The next several tables in this section are data for individual study areas. Tables 3.22 through 3.30 are derived from the USAC data. In each table, only payments made in 2005 through projections for 2009 are included. Also, only those study areas that received payments for the support mechanism covered by the table for those years are included in the table. Payments for 1998 through 2001 can be found in the 2006 *Universal Service Monitoring Report*, payments for 2002 and 2003 can be found in the 2007 *Universal Service Monitoring Report*, and payments for 2004 can be found in the 2008 *Universal Service Monitoring Report*. Table 3.22 has HCLS payments. Table 3.23 has safety net additive support payments. Table 3.24 has safety

47 These are the carriers that settle on a cost basis. Costs for the remaining ILECs, which settle on an average schedule basis, are attributed by NECA on the basis of those carriers' average number of loops per exchange.

48 The data submitted by NECA include payments that would have been made to non-rural carriers if the forward-looking high cost model had not been implemented, which form the basis of the hold-harmless calculations. Consequently the amounts shown in Table 3.6 are a better indication of the actual HCLS payments.

valve support payments. Table 3.25 provides, by non-rural study area, the high cost support using the forward-looking high-cost model support mechanism. Table 3.26 has LTS payments. Table 3.27 has ICLS payments. Table 3.28 has IAS payments for price-cap companies. Table 3.29 has LSS payments. Table 3.30 has the total support payments for all seven programs. Each of these tables contains the annual amounts for only those years for which a support mechanism was in place. Table 3.27 has the final ICLS true-ups for 2005 through 2007, and Table 3.29 has the final LSS true-ups for 2005 through 2007.<sup>49</sup> The other numbers (except for 2009 data) are based on the actual payments, as reported by USAC, and include out-of year adjustments for prior years. In all cases the 2009 total is based on the fourth quarter projection. CETC study areas listed in the *USAC Filing for the Fourth Quarter of 2009* as being ineligible for support (because they applied for, but have not yet received, ETC status) have been excluded from these tables.

Tables 3.31 through 3.35 are derived from NECA's 2008 filing.<sup>50</sup> Table 3.31 contains individual study area data for 2007 for unseparated NTS costs (Revenue Requirement), the number of loops, and costs per loop. It also shows the expected HCLS payments for 2009, based on 2007 data, and the percentage of the national total HCLS that goes to the study area. For study areas that acquired exchanges from another study area and had to report the amounts for the acquired exchanges separately, the study area code is appended with an A or B for the data for the acquired exchanges. In the second column of Table 3.31, the types are cost (C) and average schedule (A), indicating the form of settlements used by that study area. The third column indicates whether the study area has been designated as rural (R) or non-rural (N). In addition to the name of the study area, the name of the holding company (if any) is also shown. The costs shown are embedded costs for all companies, and the payments shown include potential payments to non-rural companies that form the basis of hold-harmless calculations.<sup>51</sup> Table 3.32 shows the percentage changes from the previous year for each of these amounts for individual study areas. In the payments column in this table, the entry "INFINITE" indicates that the payment was zero in the first year and positive in the second year.

Tables 3.33 through 3.35 present individual study area data for the historical information filed for 2003 through 2007 in the 2008 filing. Table 3.33 shows the unseparated NTS revenue requirements for each year. Table 3.34 shows the number of loops. Table 3.35 shows the unseparated NTS revenue requirement per loop.

49 Final true-ups are completed about two years after the initial payments are made. See footnotes 45 and 46 for citations to the final true-up filings.

50 National Exchange Carrier Association, Inc., *Universal Service Fund 2008 Submission of 2007 Study Results* (sent September 30, 2008, received October 1, 2008).

51 The data submitted by NECA include payments that would have been made if the forward-looking high cost model had not been implemented. Consequently, Table 3.22 is a better indication of actual HCLS payments.

In compiling the historical data, it is necessary to account for changes that have occurred in the study areas over time. These changes are noted in Table 3.36.<sup>52</sup> In cases where study areas have merged, the pre-merger data for all of the merged study areas have been combined and reported as the data for the surviving study area in Tables 3.33 through 3.35. In cases where there has been an ownership change resulting in a code number change, the pre-change data is reported under the new code number and name. In the case of newly created study areas, pre-creation data is reported as 0. In Table 3.32, percentage changes in the case of mergers are comparisons of the surviving study area data with the consolidated pre-merger data. In the case of sales or exchanges, for comparison purposes the data for the sold exchanges are consolidated with the data for the study area that divested them.

Each year NECA submits detailed account data used to calculate the unseparated revenue requirement per loop for each study area that settles on a cost basis, and total attributed revenue requirements for study areas that settle on an average schedule basis. In its filings since 1993, in addition to submitting such information for the latest year, NECA also submitted revised information for the four preceding years. The detailed account data are not reported here, but the most recent revision of the data for each year since 1988 is available in electronic form on the Wireline Competition Bureau Statistical Reports website [www.fcc.gov/wcb/stats](http://www.fcc.gov/wcb/stats).

---

52 Because the study areas were matched between years by study area code number, changes in only the name of the company are not included in this list. However, for name changes between 2006 and 2007, Table 3.32 shows the old name in parentheses.

**Note 1:** All of the individual line items include some estimates and are subject to further adjustments under current NECA procedures.

**Note 2:** The pool year is the calendar year. The 2007 pool year data are reported as of February 2008. The 2008 pool year data are reported as of February 2009.

**Note 3:** Year-to-year changes are affected by changes in the number of companies participating in NECA tariffs, sales and acquisitions of assets by participating companies, average schedule to cost conversions, and mid-year tariff changes in rate levels.

**Note 4:** Amount includes end-user SLC waiver revenues for NECA tariff participants.

**Note 5:** Residue for distribution is total revenues less total expenses.

**Note 6:** Residue ratio is calculated by dividing the amount of residue for distribution by the amount of average net investment and multiplying by 100.
